Canopy Operation

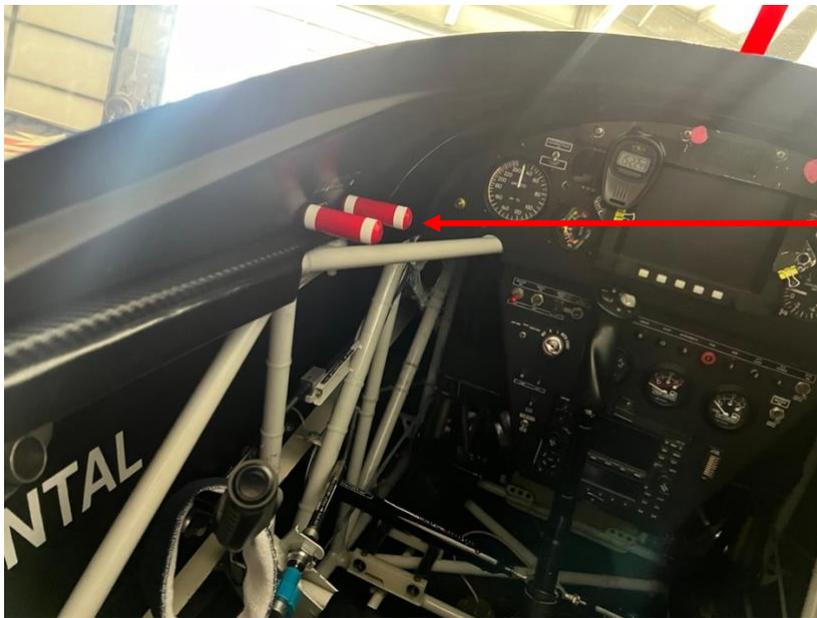

*Approach aircraft on left side

*Locate sliding vent window.

*Push window in

*Slide window aft

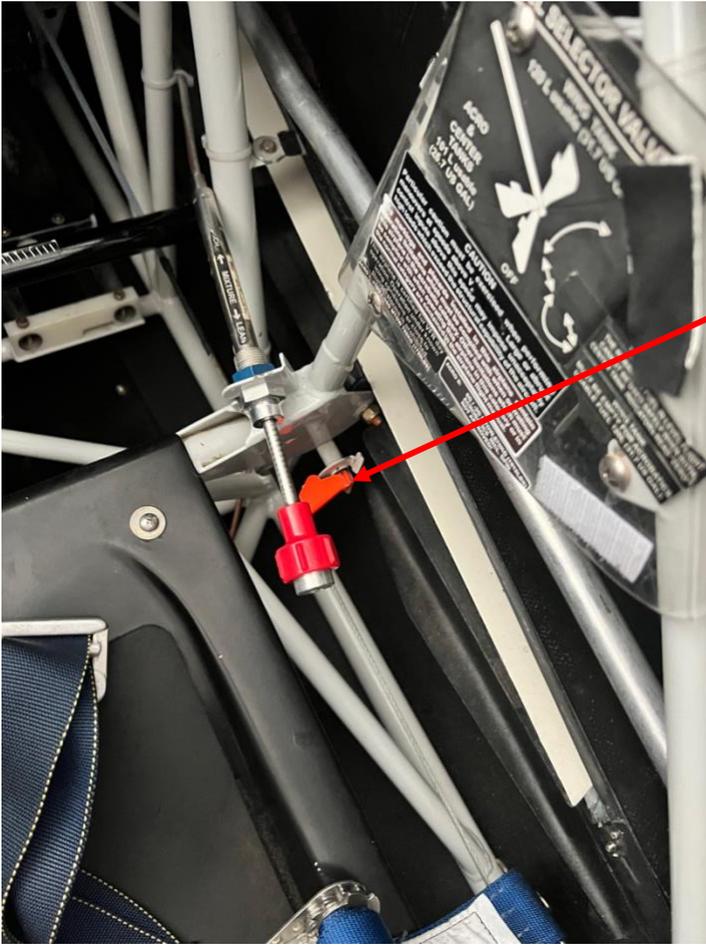

*Insert right arm into cockpit through window.

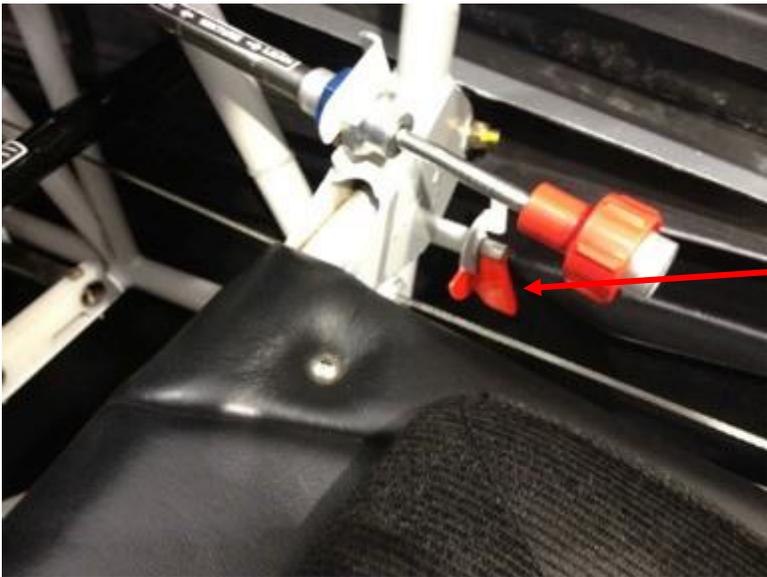

*Squeeze both red handles.
This releases the close mechanism.

*You can now lift the Canopy Up and to the right.

Fuel Shutoff Valve

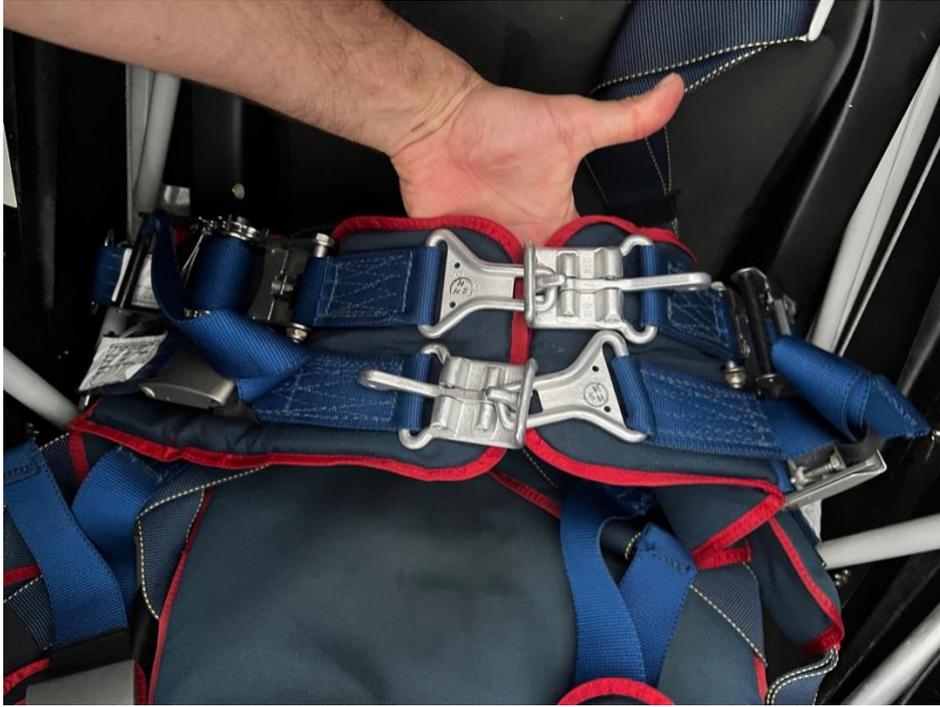

Fuel shutoff valve location:
Right side of the Cockpit.
(Forward corner of pilot's seat)

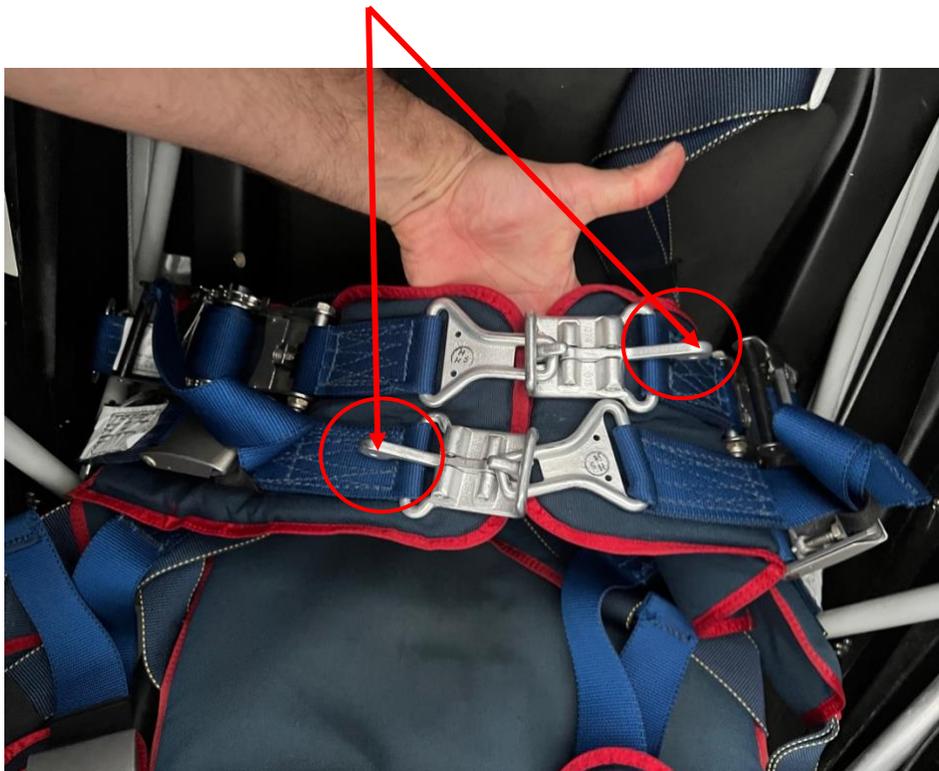

To shut off the fuel:
Pull valve lever aft and rotate down to the 6 o'clock position.

Seatbelt Operation

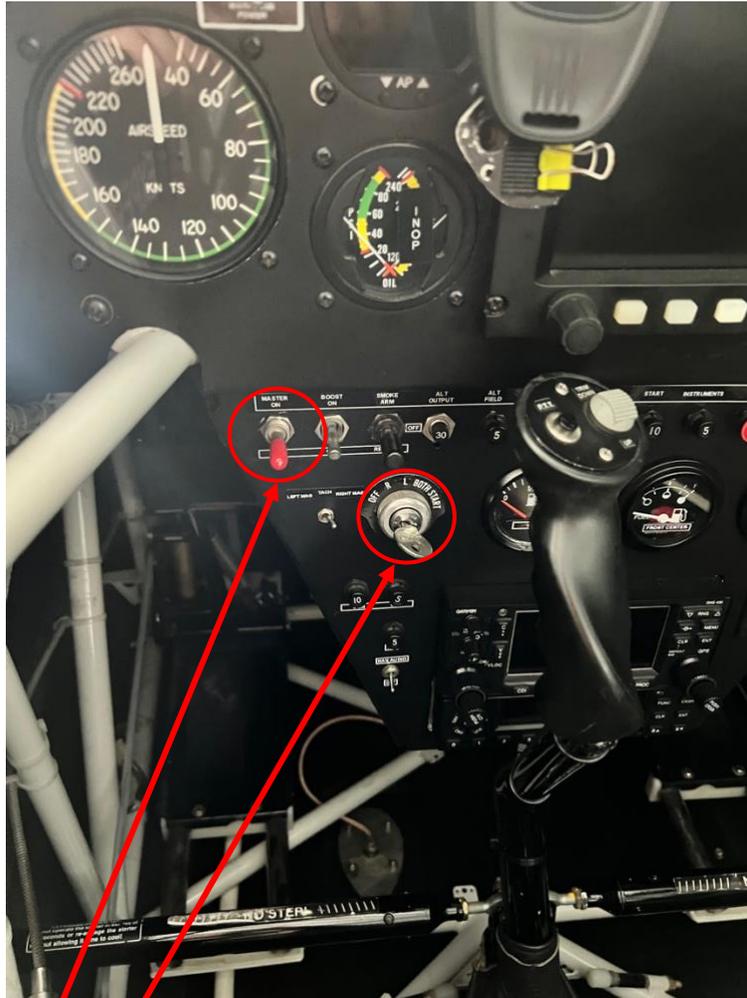

To release belt, locate the two silver levers at the center of the belts. Lift the rounded end of each lever away from the torso.

Master Switch and Magnetos Operation

Master Switch and Magnetos Operation cont.

The master switch, controlling all avionics and battery is a small red switch located on the left/bottom portion of the instrument panel. Flip the switch down to turn off.

The magnetos may be turned off by switching the key fully to the left.
